Test Procedure: The test was conducted by applying 5 drops of each reagent on the surface, covered with a watch glass. All chemicals were tested at room temperature for a period of 24 hours, rinsed off with water and evaluated.

Test Results:
No Effect: No detectable stain, loss of gloss or change in work surface material.
Excellent: Slight stain or loss of gloss, but no change to the function, smoothness or the life of the work surface material.
Good: A clearly discernible stain or loss of gloss, but no change to the function, smoothness or life of the work surface material.
Fair: Unacceptable staining or discernible deteriation or etching of work surface material.
Failure: Severe stain or moderate deterioration, pitting, cratering or
etching of the work surface material.
